

PRODUCT DATA SHEET
AWLBRITE SEMI GLOSS
J3630

Features & Uses

AWLBRITE Semi Gloss is a product developed for the professional to aid in the finishing of interior wood surfaces. AWWBRITE Semi Gloss provides a low sheen, 30° gloss finish for interior surfaces where a durable fast drying finish is required. The AWWBRITE product line provides a far more durable finish than varnish, is faster curing and as easy to apply. Do not use below the waterline. These products are recommended for interior use only.

Specification Data

Type: Three Component Acrylic Urethane.

Color: J3630 – Clear Semi Gloss.

Packaging: Gallons and Quarts.

Theoretical Coverage - Sq. Feet/Gallon: 930 Sq. Feet (86 m²) at 1 mil dry (25 microns); 93 Sq. Feet (8.6 m²) at recommended dry film thickness of 10 coats.

Coverage calculations are based on theoretical transfer efficiency of 100%. Actual coverage rate obtained will vary according to equipment choice, application techniques, part size, and application environment.

Recommended Wet Film Thickness: 2.0-2.5 mils (50-62 microns) per coat.

Recommended Dry Film Thickness: 1.0-1.2 mils (25-30 microns) per coat.

Anticipated Cure Time at 77°F (25°C) /50% R.H: 3 hours to recoat; 12 hours to light service; 7 days for full cure.

Recoatibility: With itself: 3 hours minimum, 24 hours maximum without sanding or scuffing.

VOC: Semi Gloss (J3630) - 352 g/lit or 2.9 lbs/gallon
Converter (J3006) – 146 g/lit or 1.2 lbs/gallon

Product Components, Reducers, Additives, and Auxiliary Components

Base - Semi Gloss.....	J3630
Converter.....	J3006
Spray Activator	A0001, A0003 or A0006
Brush Activator.....	A0031
Equipment Cleaning.....	T0001, T0002, or T0003, or M.E.K.

Application Equipment

Conventional air atomized spray or HVLP spray. J3630 can also be applied by brush with excellent results. Do take care to apply thin, smooth coats to avoid uneven gloss level (when applied by brush).

SPRAY EQUIPMENT

Pressure Pot System

Binks or equivalent:
Spray Gun: #95
Fluid Nozzle: #63BSS (.046" Orifice Size)
Fluid Needle: #663A
Air Nozzle: #63PB
Pressure pot gauge should read 8 to 12lbs
With 50 to 60 lbs atomization.

Siphon or Cup Gun System

Binks or equivalent:
Spray Gun: #95
Fluid Nozzle: #66SS (.070" Orifice Size)
Fluid Needle: #665
Air Nozzle: #65SK
Atomizing air pressure should be approximately 50 to 60 lbs.

AWLBRITE SEMI GLOSS
J3630

High Volume Low Pressure System

Binks MACH 1 or equivalent pressure pot:
For use with all Awlgrip Topcoats and low viscosity primers.
Fluid Nozzle: #91 (.040" Orifice Size)
#92 (.046" Orifice Size)
Fluid Needle: #54-4382
Air Nozzle: #93P

Surface Preparation

The wood should be clean, dry, smooth, and well seasoned, with less than 15% moisture content.

Ideally AWWBRITE Semi-Gloss is applied as a finish coat.

Apply AWWBRITE Semi-gloss to wood that has been sealed with Awlbrite Quik-Fil, Awlbrite Clear or Awlspar.

Note: Due to the wide variety of substrates, surface preparation methods, application methods and environments, customers should test the complete system for adhesion and compatibility under their conditions prior to full scale application.

Mixing and Reduction

AWWBRITE Semi Gloss is a three component product. Mix by volume 2 parts J3630 with 1 part J3006 until one smooth, homogenous mixture is obtained. Then add 1/2 part Activator (A0001, A0003, A0006 or A0031). Overall mix is 2:1:1/2 by volume. Example: 4 oz. J3630, 2 oz. J3006, 1 oz. A0001. Additional A0001 can be added if desired, but standard 2:1:1/2 ratio is required. Mix and use small quantities of AWWBRITE products at a time. Keep the original containers closed when not in use.
Induction Time after Mixing: None
Anticipated Pot Life at 77°F (25°C), 50% R.H: 1 to 2 Hours

AWWBRITE Semi Gloss is designed for spray application due to the possibility of uneven gloss when applying semi-gloss products. PRO-CURE accelerators will continue to shorten the pot life.

Application Instructions

Apply AWWBRITE Semi Gloss by spray in light, slightly wet coats until the desired finish is achieved. Allow 3 hours tack time between coats. This spray method allows uniform development of the material without flooding or floating.

Sand as little as possible. Sanding is only required when:
Runs or sags need to be levelled.
Dirt or grit needs to be removed from the surface.
If it has been more than 24 hours since the last application.

If no levelling is required, but it has been more than 24 hours since the last application; dulling the surface with Scotchbrite® Pads is recommended. If possible, avoid applying or curing the material in direct sunlight.

Warning

Do not exceed the recommended wet film thickness.

Temperature Range: Optimal Surface/Ambient Temperature range is 18°C (60°F) to 35°C (95°F). Proper application and/or cure results may be more difficult to achieve when conditions are outside this range. Do not apply paint materials to surfaces less than 3°C (5° F) above dew point, or to surfaces warmer than 41°C (105°F). Ambient temperature should be minimum 10°C (50°F) and maximum 41°C (105°F).
